2

Brainstorm

Flight planning is a critical part of the airline industry. It involves determining the most efficient routes, aircraft, and crew for each flight. The goal of this project is to develop a machine learning model that can accurately predict flight delays, helping airlines to better manage their operations and passengers to adjust their travel plans.

The problem statement for this project is to develop a machine learning model that can accurately predict flight delays, helping airlines to better manage their operations and passengers to adjust their travel plans.

Tip: The problem statement is a clear, concise statement of the problem you are trying to solve. It should be specific, measurable, achievable, relevant, and time-bound.

Group identity

These birds, even though they were raised in the same place, have never produced a single chick in 100 years. Why?
